

## KABULI CHICKPEA: CDC 3662

Breeder:	Year released to Select Seed Growers: 2019	Plant Breeders Rights: Applied
Dr. Bunyamin Tar'an Crop Development Centre University of Saskatchewan Saskatoon, SK.		

Kabuli chickpea variety 3662 has similar yield and agronomic characteristics as CDC Leader and CDC Orion however it has the advantage of imazamox herbicide tolerance (Solo ADV as per PMRA label registration). In the 2018 Chickpea Regional Trial (CPRT), 3662 yielded 100% of the check variety Amit in the brown soil zone and 96% in the dark brown soil zone (Table 1). This variety has similar maturity to CDC Palmer and CDC Orion and similar resistance to Ascochyta blight as CDC Leader. Seed size is smaller than CDC Palmer or CDC Orion.

**Strengths:**

- Herbicide tolerance (imazamox)
- High yielding herbicide tolerant Kabuli chickpea

**Neutral:**

- Similar agronomic and maturity characteristics compared to CDC Palmer and CDC Orion
- Similar disease resistance as CDC Leader

**Weaknesses:**

- Smaller seed size than CDC Palmer

**Table 1: Agronomic performance data summary from the 2018 Chickpea Regional Trial in western Canada**

Variety	Area 1 (6 sites) Brown soil zone		Area 2 (2 sites) Dark brown soil zone		Height (cm)	Days to flower	Days to maturity	Ascochyta Blight (0-9 scale)	Seed weight (g/1000)	Herbicide tolerance: SOLO ADV (imazamox)
	Kg/ha	% Amit	Kg/ha	% Amit						
Amit (check)	2231	100	4064	100	43	50	96	3.9	267	No
CDC Frontier	2229	100	4060	100	39	48	97	4.1	369	No
