

SMALL RED LENTIL: CDC IBC-1235 (CL[®])

Breeder: Dr. Albert Vandenberg
Crop Development Centre
University of Saskatchewan
Saskatoon, SK.

Year released to Select Seed Growers: 2019
Sub-licensed outside of SK: Not assigned
International Distribution Rights: Not assigned

Plant Breeders Rights: Applied

CL (Clearfield[®]) is a Trademark of BASF Inc.

CDC IBC-1235 is a high yielding, small red Clearfield[®] lentil variety. This line yielded 110% of CDC Maxim in the 2015-2017 lentil co-op trials (Table 1) and 120% in the 2017-18 lentil regional variety trials (Table 2). Seed coat colour, cotyledon colour, flowering time, maturity, plant height, and disease resistance characteristics (Table 3) are similar to CDC Maxim. Seed size and thickness is slightly less than CDC Maxim (Table 4). Application for PBR'91 protection for CDC IBC-1235 has been submitted.

Strengths:

- High yield compared to CDC Maxim
- Imidazolinone tolerance

Neutral:

- Similar agronomic and maturity characteristics compared to CDC Maxim
- Similar disease resistance as CDC Maxim

Weaknesses:

- Seed thickness less than CDC Maxim

IBC-1235

Table 1: Three Year Summary of Agronomic Performance for IBC-1235 vs. CDC Maxim from the 2015-2017 Lentil Co-op Trials in Western Canada

Line	Herbicide Tolerance	Year of Release	Yield (% Maxim)	Days to Flower	Days to Mature	Height (cm)	Lodging (1-5)	Seed Weight (g/1000)
CDC Maxim	CL	2007	100	55	95	37	1.5	40
IBC-1235	CL	2019	110	57	95	37	1.2	39
