* Product registered for suppression only.

** Follow label for proper rotation of fungicides with different modes of action. Some products are not labelled for two sequential applications. Rates and staging may vary by fungicide and disease pressure. Read and follow label directions.

*** Pathogen species claim may differ by label. Refer to specific fungicide label for additional information.

NOTE: Anthracnose insensitivity to Group 11 fungicides has been found in lentils. It is not recommended to apply Group 11 products alone for Anthracnose control in lentil.
